# Robots Need Not Apply: Human Solutions for the Skills Revolution

**“We are in the midst of a Skills Revolution, both in Australia and around the globe.** Technology is transforming organisations, skills needs are changing rapidly and we know employers cannot find the talent they need. People with in-demand skills who can continuously learn and adapt can call the shots. Those with omnipresent skills see wages stagnating and insecurity ahead, playing out in politics, protectionism and populism.

We also know that digitisation is happening at various speeds, impacting regions, sectors and organisations across Australia at different times and in different ways. In the past, transformation took decades, even centuries. Today, it is happening at an unprecedented pace, yet the outcome is unknown. **Human strengths, ingenuity and preference will drive how we leverage technology in our lives and businesses.**

In all future scenarios, helping people to upskill in this constantly-changing world of work will be vital to ensuring their employability and it must happen at speed and at scale.

**Skills and access to employment will be the solution to this Skills Revolution.** We need to identify adjacent skill sets and help people to start thinking differently. In this digital world success will not always require a college degree, but will rely heavily on the appetite for ongoing learning and skills development.

Australian employers are anticipating that the continued growth in automation will drive an increase in headcount over the next two years. And with the right skills mix, people will augment rather than compete with technology. As leaders, helping our employees to upskill and future-proof themselves is now the defining challenge of our time.”

---

**Richard Fischer,**  
**Managing Director, ManpowerGroup Australia & New Zealand**

WE ASKED **20,000 EMPLOYERS**

**IN 42 COUNTRIES** WITH OVER 1500 ACROSS AUSTRALIA ABOUT:

- The likely impact of automation on their headcount in the next two years
- Which functions within their organisation will be most affected
- The human skills they value most and which they struggle to find

## HUMAN STRENGTHS IN THE SKILLS REVOLUTION: SOFT SKILLS + TECHNICAL + DIGITAL SKILLS = BEST BLEND

Labour market predictions talk of extremes over the long-term: technology eating our jobs, robots replacing drivers, even the threat of a world without work.<sup>2</sup> In the near-term we are seeing new jobs and new skills. For the second year, eighty-three percent of Australian employers say their headcount will remain the same or increase in the next two to three years as a result of automation. And, as skills needs are changing faster, employers do not always know which skills they will need even eighteen months from now.

This report provides a real-time view of the impact of automation on the workforce in the digital age – not five or ten years out, but now and in the near-term. It shows which functions within companies are set to grow or contract. And it provides insight on the value of soft skills – or **human strengths** – that are most in-demand by employers and which they have the greatest challenge finding.

As world of work experts, we find work for 3 million people annually and have nearly 30,000 employees advising 400,000 companies on hiring decisions and skills development every year. We are well-placed to share human solutions for the Skills Revolution.

***of Australian employers plan to maintain or increase headcount due to automation***

## HUMAN STRENGTHS

include traditional soft skills like communication, collaboration and creativity, as well as uniquely human traits like empathy, relationship-building, cognitive ability, curiosity and the desire to learn.

**Human strengths are skills that will augment technology and reduce the threat of replacement by automation.**

# THE AUSTRALIAN IMPACT OF DIGITISATION

## DIGITISATION: A GLOBAL PHENOMENON

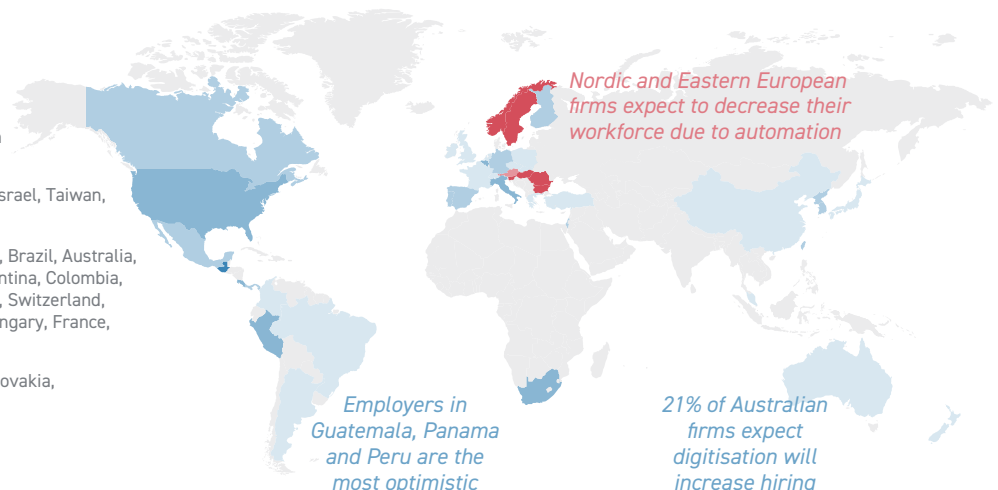

No country is immune from digitisation. As industries shift to more advanced, automated processes, employers need additional people – especially those with IT skills – to drive transformation. **Of the 42 countries surveyed, 34 including Australia have more companies expecting to grow rather than shrink their workforce as a result of digitisation.**

### Impact of Technology on Headcount in the Next Two Years

#### % that will Increase Headcount

41 – 50	Guatemala
31 – 40	Panama
21 – 30	Peru, Netherlands, USA, South Africa, Belgium, Italy
11 – 20	Costa Rica, Mexico, Portugal, Israel, Taiwan, Spain, Canada
0 – 10	United Kingdom, New Zealand, Brazil, Australia, Turkey, Germany, Japan, Argentina, Colombia, Czech Republic, Ireland, China, Switzerland, Singapore, Greece, Poland, Hungary, France, Sweden
-1 – -10	Norway, Slovenia, Romania, Slovakia, Finland, Hong Kong, Bulgaria
-11 – -20	Austria

#### % that will Decrease Headcount

Latin American employers continue to be the most optimistic about the impact of automation on hiring. In Europe, German and Belgian employers now predict net headcount increases – a brighter picture than last year.<sup>3</sup> **In Australia 21% of companies expect automation to increase hiring, versus only 3% of Chinese firms.**<sup>4</sup>

## ROBOTS TAKE TASKS, NOT JOBS: THE SKILLS RESHUFFLE

Most employers expect overall headcount to increase as a result of digitisation, however, the impact varies by function.

**Frontline & Customer-Facing functions come out on top as organisations invest in digital skills, and IT are close behind.**

In contrast, Administrative & Office functions expect the greatest decreases in headcount as a result of automation.

The rise in consumerism and the value companies now place on customer service and last mile delivery are increasingly evident in a digital world. **Roles that are routine or add less value to customers are under greatest threat of automation.**

### Functions Likely to See the Largest Increase and Decrease in Headcount in the Next Two Years

**Frontline & Customer Facing Functions** expect the **greatest increase** in headcount; **Administrative & Office** functions expect the **greatest decrease**.

## MANUFACTURING & PRODUCTION: THE BIG CHURN

**Employers anticipate significant churn as new skills emerge and others become obsolete.**

Manufacturing & Production functions are leading the digital revolution for the second year with employers predicting the highest turnover – increases (14%) and decreases (14%). The rise of Industry 4.0 is fueling the advanced manufacturing renaissance. As manufacturers recalibrate their workforce and experiment to find the right digital skills, other industries will soon follow.

## HR & FINANCE: DOING MORE WITH LESS

Most companies expect headcount in HR and Finance functions to remain stable with net hiring at 0 & -6% respectively. **As organisations implement new technology and adapt their workforce and skills to leverage it, these functions will be tasked to drive efficient transformation**, while the overall workforce grows elsewhere in the organisation.

In the Financial Services sector specifically – companies including financial services, real estate and insurance – demand for IT hires is expected to be five times greater than hiring for accountancy staff.

***of companies shrinking their HR teams the most, still expect an overall increase in headcount***

## HUMAN STRENGTHS STAND OUT IN THE DIGITAL AGE

### Most Valued Soft Skills Are Hard to Find

# NOBODY PUTS IT IN THE CORNER: DIGITAL COMMUNICATORS IN HIGH DEMAND FOR FRONT AND BACK OFFICE

In the Skills Revolution, for organisations and individuals alike, the best blend of high-tech and high-touch will be the combination of human strengths with technical and digital know-how. **8 out of 10 companies say communication skills, written and verbal, are their most valued soft skill followed by collaboration and problem-solving.**

Finding talent with the right skills mix is a challenge: employers say problem solving, communication, organisation and collaboration are also the hardest skills to find in candidates.

## Most Valued Soft Skills by Function

## Hardest to Find Soft Skills by Function

Communication skills are especially important in IT functions where people are increasingly working across teams leading digitisation. **IT is no longer a siloed, stand-alone department; today it's a cross-functional, core element of business transformation.** In turn, organisations value front-line workers who can communicate, problem-solve and understand new technology and systems that provide better client service and add value where customers want it most.

***of companies planning to increase headcount in IT roles say communication is the most valued soft skill***

# IDENTIFYING IN-DEMAND SKILLS: PROVIDING ACCESS TO EMPLOYMENT

## UPSKILLING WORKERS FOR A NEW CAREER PATH IN AUSTRALIA

As fast as new skills develop, old ones are becoming obsolete. Automation is changing how work gets done and we must create **upskilling opportunities** for workers at risk of being left behind. We must identify skills adjacencies that create **clear career paths** from this job to that job.

With job vacancies and recruitment demand projected to increase as the economy continues to grow, Australia's recruitment industry is experiencing an influx of innovation as competition for talent intensifies. And although many components of the recruitment lifecycle may be automated, providing our employees with **accelerated reskilling programs and faster, shorter bursts of on-the-job training** will allow them to capitalise on their **human strengths** in order to augment technology and remain employed.

**Enter: The Experis Academy – a twelve-week intensive training program developed by ManpowerGroup Australia's Experis team; aimed at producing a new breed of human recruiter.** The Academy progresses from theory and classroom learning to on-the-job practice at a live desk, giving employees the chance to experience a new career path whilst developing the soft and technical skills required to communicate effectively and thrive in today's digital age.

On completion of the program, we don't assume that Academy graduates have learnt everything they need to learn. Each employee is guided through a further nine months of rigorous career development and training so that they may grow in their chosen area of recruitment expertise and expand their human strengths as well as IT, Desktop, and Business Communication skills.

“

*"Before I considered the Experis Academy Program, I used to own a gym. **I had never considered a career in the recruitment industry and didn't think I had the skills required to be a successful recruiter.** Throughout the program, I quickly realised the importance of communicating effectively and being able to collaborate with my peers in order to help people find meaningful work. I am really enjoying the challenges and rewards that come with taking on new skills and a new career."*

*- Ricky Goundar,  
2018 Experis Academy Graduate*

”

*In the Skills Revolution, all **employees will need digital skills and the ability to problem solve and collaborate** as more organisations and functions are poised for greater levels of digitisation.*

## ACCELERATED RESKILLING OF U.S. VETERANS INTO ADVANCED MANUFACTURING AND DOUBLING SALARIES

Manufacturing employers in the U.S are experiencing a gap between the skills they need and those people have. **By 2020, there will be up to two million unfilled manufacturing jobs.** To close this gap, together with the Digital Manufacturing Design Innovation Institute of Chicago, ManpowerGroup mapped 165 advanced manufacturing roles to help define the jobs and skills of today and tomorrow.<sup>6</sup>

ManpowerGroup identified military veterans with engineering experience as a population with relevant adjacent skills that could be easily adapted, developed and applied to these new roles. **They also had strong learnability: the desire and ability to upskill for these high-demand instrumentation, automation and controls technician roles.**

In partnership with Rockwell Automation and the Academy of Advanced Manufacturing, we launched **a fast-track 12-week training program combining classroom learning with hands-on lab experience and career coaching with a heavy focus on soft skills.**

The first class graduated in November 2017; all secured job offers from top employers and many doubled or even tripled their salaries. By identifying a skillset with growing market demand, and tapping an underutilised segment of the workforce with adjacent skills and enrolling people with proven learnability, we unleashed their potential, developed valuable talent and changed lives.<sup>7</sup>

# HUMAN SOLUTIONS FOR A SKILLS REVOLUTION

Steps employers can take to boost their workforce strategy to prepare for digital transformation, changing business models and shifting skill needs.

## 1 HIRE FOR LEARNABILITY

Employers can no longer rely on a spot market for talent. We need people with learnability – the desire and ability to develop in-demand skills to be employable for the long-term. Employability today is less about what you already know and more about your capacity to learn.

**Encourage a culture of learnability to retain and attract the best talent:** [www.learnabilityquotient.com/](http://www.learnabilityquotient.com/)

## 2 IDENTIFY SKILLS ADJACENCIES

Set people up to succeed. Map out skill needs, then assess and identify candidates with adjacent skills sets – those skills that are closely connected and can be adapted to new roles.

**Build on proven talents and equip people to shift from traditional to digital skillsets.** See how ManpowerGroup and the Digital Manufacturing Design Innovation Institute defined and mapped 165 leading-edge manufacturing roles: [www.right.com/digitalmanufacturing](http://www.right.com/digitalmanufacturing)

## 3 DEVELOP DIGITAL LEADERS

While 80% of leadership capabilities remain the same – adaptability, drive, endurance and brightness – a new style of leadership is required for the digital age. **What got you here, won't get you there.** Leaders today must be able to dare to lead and be prepared to fail fast. They need to nurture learnability, accelerate performance and foster entrepreneurialism. And of course, they must unleash potential in others.

How ready are you to lead in the digital age? Find your Digital Quotient: [digiquotient.io/australia](http://digiquotient.io/australia)

DigiQuotient

**Helping people upskill and future-proof themselves in a fast-changing world of work will be the defining challenge of our time.**

**Identifying in-demand skills and providing access to employment will be the solution to the Skills Revolution.**

## ABOUT THE RESEARCH

ManpowerGroup commissioned Infocorp to carry out quantitative research in October 2017 surveying 19,718 employers across six industry sectors in 42 countries. The research was conducted in Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, China, Colombia, Costa Rica, Czech Republic, Finland, France, Germany, Greece, Guatemala, Hong Kong, Hungary, Ireland, Israel, Italy, Japan, Mexico, Netherlands, New Zealand, Norway, Panama, Peru, Poland, Portugal, Romania, Singapore, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Taiwan, Turkey, UK and USA. Data analysis conducted by Reputation Leaders.
